Research Overview

My research lies in the general area of **human-computer interaction** (HCI). I design **mixed reality** (MR) technologies that enable novel ways of interacting with information. Much of my work explores application of **MR in surgical contexts**. At the same time, I study the challenges of **incorporating MR in multi-user environments**, and develop solutions that enhance both personal and collaborative experiences in these spaces. I have published my findings in leading venues such as ACM ISS, ACM SUI, and IEEE ISMAR.
